

// PEER CODE REVIEW FOR BooTheDog.html //

// "Ln." is abbreviation for the word "Line," which will be followed by the respective line number in reference. //

1. Ln. 1: It's a good practice to have a closing tag, even if the HTML tag self-closes.
2. Ln. 2: This line should read `<html lang="en">`, in order to be up to standard of HTML 5.

// Concerning the `<head></head>` tag area //

1. Ln. 3 to 13: It is advisable to indent the `<head></head>` and `<body></body>` tags, once, since they are under the `<html lang="en"></html>` tag.
2. Ln. 4: should have read (in keeping with the industry standard) under the `<head></head>`, `<meta charset="UTF-8">`
3. Ln. 5: should have read (in keeping with the industry standard) `<meta name="viewport" content="width=device-width, initial-scale=1.0">`
4. Ln. 12: advise to double quote the href source, in the `<link href... />`; i. e. `<link href="https://fonts.googleapis.com/css?family=Montserrat|Roboto+Slab|Yellowtail" rel="stylesheet" type="text/css" />`

// Concerning the `<body></body>` tag area //

1. Ln. 16 to 111: Proper indentation is needed between lines 16 to 111. If you close each relative tag, within the `<body></body>` tag, you will be able to see which tags need indenting, easier. Most are off by one indentation. Improper indentation could yield improper code.
2. Ln. 19: Suggest using a header tag; i. e. `<h1>Boo The Dog Fan Page!</h1>`
3. Ln. 22: `<div class="row">` needs to be indented to the left: it is parent to `<div class="col-sm-12">`; which is the parent `<div class="panel panel-primary">`, whose child is `<div class="panel-heading">Instructions</div>`, whose cold is `<div class="panel-body text-center">`. Once these are indented, properly, most IDE's can show you their closing tags (if one was made/needs to be made).
4. Ln. 27 to 29: Advised to use `<p></p>` verses `<h4></h4>` tags.
5. Ln. 35 to 39: Improper indentation. `<div class="row">` is parent to `<div class="col-sm-6">`, whom is parent to `<div class="panel panel-primary">`, whom is parent to `<div class="panel-heading">About Boo</div>`, whom is parent to `<div class="panel-body">`.
6. Ln. 40 to 42: Each line should have a `<p></p>` tag; and be under the `<div class="panel-body"></div>`.
7. Ln. 44 to 46: These are the closing tags to Ln. 35-39; and should be properly indented, respectively.

8. Ln. 47 to 54: Improper indentation of `<div class="col-sm-6"></div>` and the child `<div></div>` tags within this `<div></div>` tag.
9. Ln. 55 to 56: Personal preference to ensuring clean code: separate the `
` tags by line; but this self-closing tag will work; but it makes things easier to read/follow the idea/thought.
10. Ln. 58 to 66: Improper indentation of `<div class="col-sm-6"></div>` and the child `<div></div>` tags within this `<div></div>` tag.
11. Ln. 67 to 81: Improper indentation of `<div class="col-sm-6"></div>` and the child `<div></div>` tags within this `<div></div>` tag.
12. Ln. 83: Personal preference to ensuring clean code: separate the `
` tags by line; but this self-closing tag will work; but it makes things easier to read/follow the idea/thought.
13. L.n 85 to 97: Improper indentation of `<div class="row text-center">` and the child `<div></div>` tags within this `<div></div>` tag.
14. L.n 99 to 111: Improper indentation of `<div class="col-sm-6">` and the child `<div></div>` tags within this `<div></div>` tag.
15. Ln. 114 to 115: don't to properly indent these closing tags to Ln. 2 and Ln. 14.
